

2025 CURRICULUM

CLINICAL SESSIONS

**IMPLANT SURGICAL
PROGRAM**

S1

SESSION 1

EXTRACTION, RIDGE PRESERVATION AND SINGLE IMPLANT PLACEMENT

DAY 1

- Hands-on Extraction & socket grafting.
- Flap management and suturing techniques.

During the Hands-on Socket Grafting session, participants will engage in practical exercises to master various clinical scenarios associated with socket grafting.

This session also covers the fundamentals of flap design for dental implant placement, including precise mid-crestal and vertical releasing incisions for optimal access and visibility. Essential suture techniques will be demonstrated to promote predictable healing and minimize postoperative complications.

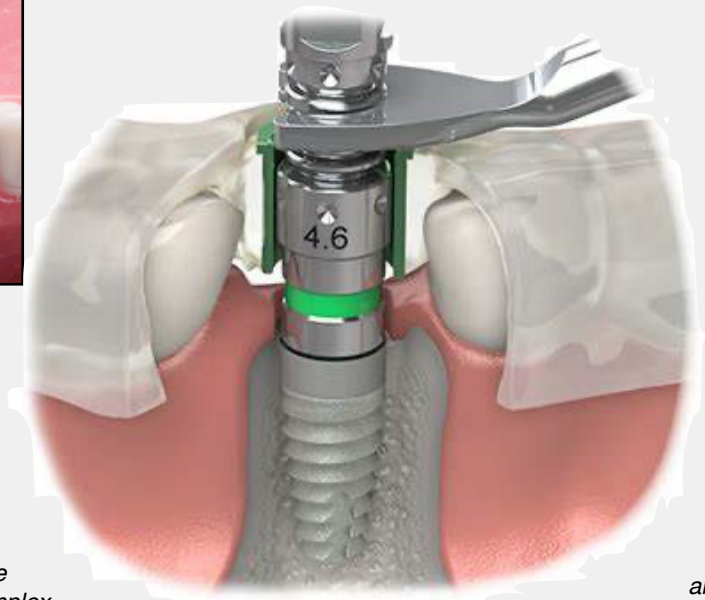

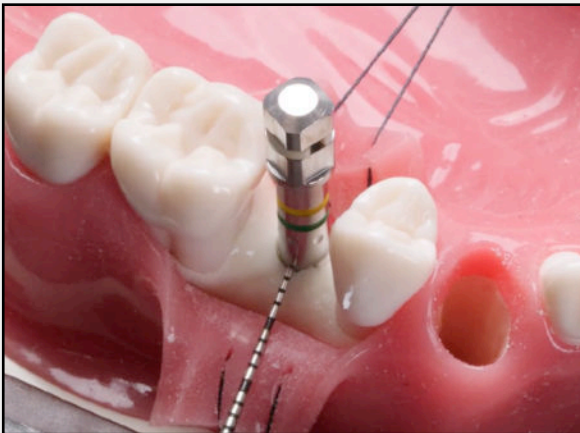

Attendees will be provided the opportunity to work with diverse grafting materials and techniques, allowing them to gain valuable experience and confidence in managing a range of clinical cases. The session aims to equip dental professionals with the skills and knowledge necessary for successful socket grafting.

DAY 2

- Free-hand 3D positioned implant placement.
- Guided 3D positioned implant placement.

By working with realistic models and guided by experienced instructors, attendees will gain valuable experience in managing complex implant cases, ensuring successful outcomes and improved patient satisfaction..

During the hands-on training session for three-dimensional dental implant placement in abundant bone, participants will engage in practical exercises to develop their skills and confidence in implant procedures. The
